### EDUCATION

#### University of Palestine

##### Information Technology

SEP 2019 - June 2023

Management Information Systems

### PROFILE

I am Mohamed Siam,skilled Backend developer with a Bachelor's degree in Information Technology. With over three years of hands-on experience, I have successfully contributed to the development of various real-time websites, including personal sites, e-commerce stores, information programs, school systems, and secure payment gateways.

My passion for staying up-to-date with the latest technologies enables me to continuously enhance my knowledge and skills. I thrive on challenges and have a proven track record of independently executing tasks with excellence, eliminating the need for constant supervision.

I am a self-driven and dedicated professional who brings innovation and expertise to every project I undertake.

### WORK EXPERIENCE

#### Laravel Backend Developer

Tech Zone

SEP 2022 - OCT 2023

As a pivotal member of the development team, I've been actively involved in building edge websites and apps, working with mobile developers and leveraging my proficiency in back-end development and using the power of Laravel to deliver a seamless experience. These are some of the roles I have held during my career:

- Dealing with Google Maps Locating addresses for users.
- Building an entry system by SMS messages on the mobile phone.
- Create notifications through the Firebase and deal with them through the Topic.
- Dealing with the external API, linking with the delivery company, and linking with WhatsApp business messages.
- Integrated systems have been created that deal with js without any page refresh.
- Dealing with the properties of the products in a dynamic, flexible and controlled manner in the panel.
- Developing the educational platform system, adding complex features such as questionnaire forms, and expanding financial management.
- Dealing with invoices and financial accounts.
- Creating a Google Forms system for Tech Zone.
- Pure php websites development.
- Dealing with the user to each using the session.
- Dealing with printing pdf files on the cashier printer.
- Continuous dealing with mobile developers and API setup.
- Build a meat selling system.
- Dealing with cache in the system to reduce server resources.

#### Laravel Backend Developer

Freelancer

2020 - 2022

As a beginner in this field, I went to work through freelance websites as a freelancer and worked on external projects as a Laravel developer  
The first website was created by a mostaq website

- Building a reservation system using Livewire.
- Dynamic control of the appearance of the site from the panel.
- Develop roles and powers using the spatie library.
